DETAILED ACTION

1. Receipt is acknowledged of the amendment filed November 19, 2002.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention

3. The claims 1, 3-6, 8-9, and 11 are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

Claims 2 and 7 are necessarily rejected because of their dependency.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 2875

5. Claims 1-6, 9, and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Nomura et al. (USPT 6,320,309 B1).

Re claims 1-2 and 11: Nomura teaches that a flat display screen anode includes phosphor elements (B, G, and R in Fig. 3) and that these elements are deposited on a biasing electrode including a resistive layer (3) and conductive layer (4). Further, he teaches that the resistive layer is deposited on a conductive layer (See Fig. 3).

Re claim 3: Nomura teaches that the phosphor elements (B, G, and R) are deposited on a reflective conductive layer (2 in Fig. 3).

Re claims 4-5: Nomura discloses that the reflective layer and the phosphor have elementary patterns (See Fig. 3).

Re claim 6: Nomura discloses that the resistive layer is formed without being patterned (3 in Fig. 3).

Re claim 9: Nomura discloses that the conductive layer has a pattern of alternate strips (See 4 in Fig. 4).

Allowable Subject Matter

6. Claims 7-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: Although Nomura discloses a resistive layer, he fails to teach that the resistive layer has the same pattern as the reflective layer or the conductive layer.
